

clientside:threats

Confidentiality

- An attacker can read secrets intended only for the client

Integrity

- An attacker can coerce the client into making unintended requests

- An attacker can modify/falsify data parsed or rendered by the client

• Availability

• An attacker can 'crash' the client

Client side threats

- **Confidentiality**

- An attacker can read secrets intended only for the client

- **Integrity**

- An attacker can coerce the client into making unintended requests
- An attacker can modify/falsify data parsed or rendered by the client

- **Availability**

- An attacker can “crash” the client

Common client side vulnerabilities
