

➡ A vulnerability is a security weakness in program which may be exploitable to realize or enable a threat

➡ A program is said to be ‘vulnerable’ if it contains any such weakness

➡ The Common Weakness Enumeration (CWE) database by Mitre attempts to catalogue these weaknesses: <https://cwe.mitre.org/>

Un/abilities

Vulnerabilities

- ➡ A vulnerability is a security weakness in program which may be exploitable to realize or enable a threat
- ➡ A program is said to be “vulnerable” if it contains any such weakness
- ➡ The Common Weakness Enumeration (CWE) database by Mitre attempts to catalogue these weaknesses: <https://cwe.mitre.org/>

Why do Vulnerabilities exist ?
