

# The impossibility of breaking OTP

The ciphertext bears no statistical relationship to the plaintext

➡ No statistical analysis

For any plaintext and ciphertext, there exists a key mapping one to the other, and all keys are equally probable

➡ A ciphertext can be decrypted to any plaintext of the same length

# The seeds of modern cryptography

## 1. **Diffusion**

Mix-up symbols

*Transposition Cipher*

## 2. **Confusion**

Replace a symbol with another

*Polyalphabetic Cipher*

## 3. **Randomization**

Repeated encryption of the same text are different

*OTP*
