## 3DES (Triple DES)

$$3DES_{k1,k2,k3}(m) = E_{k3}(D_{k2}(E_{k1}(m)))$$

- → Uses three keys; some same or all distinct
- → Effective key length (entropy): 112 bits or 168 bits
- ✓ Very popular, used in PGP, TLS (SSL) ...
- But terribly slow

## AES - Advanced Encryption Standard

## Timeline

- 1996 NIST issues public call for proposal
- 1998 | 5 algorithms selected
- 2001 winners were announced
