How passwords are stored

- **In clear** (really bad)

- **Hashed** (bad)

- **Salted Hash** (better and easy to manage)

- **Encrypted** (best but complex to manage)

Unsalted passwords

pass4security → **sha2** → 8r#Yul@6rP

Salted password

pass4security + 5%pL6* → **sha2** → kl?z90$J7k
